

JavaScript Arrays - Complete Guide

1. Creating Arrays

`let arr = [1,2,3];`

`let arr = new Array(1,2,3);`

`let arr = Array.of(1,2,3);`

`let arr = Array.from('abc'); // ['a','b','c']`

2. Add & Remove

`push()` -> add at end

`pop()` -> remove from end

`unshift()` -> add at start

`shift()` -> remove from start

3. Searching

`arr.includes(2)`

`arr.indexOf(2)`

`arr.find(x => x > 2)`

`arr.findIndex(x => x > 2)`

4. Loop Methods

`map` -> transform array

`filter` -> condition filter

`forEach` -> iterate only

`reduce` -> accumulate values

5. Sorting

`arr.sort((a,b) => a-b) // asc`

```
arr.sort((a,b) => b-a) // desc
```

```
arr.reverse()
```

6. Slice vs Splice

slice(start,end) -> no change original

splice(start,count,items) -> modifies array

7. Spread & Rest

```
let newArr = [...arr, 4,5]
```

```
function sum(...nums) {}
```
